Category	Advisory
Livestock	Provide clean and fresh drinking water regularly due to moderate temperatures. Ensure well-ventilated, dry, and shaded shelters to protect animals from humidity and mild rainfall. Monitor animals for signs of respiratory issues due to humid conditions.
Poultry	Keep poultry sheds dry and well-ventilated. Avoid overcrowding to reduce stress and disease risk during humid and rainy days. Provide clean water and balanced feed during cooler morning and evening hours. Maintain hygiene to prevent fungal and bacterial infections.

Recommendations to the farmers:-

Weather based advisory

Crop	Stage	Advisory Based on Forecast
Paddy	Summer-Harvesting Kharif- Nursery preparation	Dry weather on 11–12 June is suitable for harvesting and drying. Use tarpaulin to protect produce from later rainfall. Prepare nursery in raised beds.
Maize	Vegetative	Avoid irrigation due to expected rainfall. Apply nitrogen fertilizers on dry days. Conduct weeding after rain when soil is moist.
Tomato	Fruit formation	Anticipated rainfall and humidity may lead to fruit borer and fungal diseases. Monitor and spray neem extract or fungicides after rain.
Chilli	Fruit formation	Ensure field drainage. Increased humidity may lead to thrips and anthracnose; avoid overhead irrigation. Use appropriate fungicides.
Banana	Fruit development	Light winds and rainfall may cause lodging – support plants. Maintain soil moisture and mulch to conserve water.
Black gram, Green gram, Red gram, Field bean, Cowpea	Sowing / Harvesting	Use rainfall and residual moisture for sowing. Harvest matured pods on dry days and dry produce well before storing.
Sugarcane	Vegetative	Rainfall will support growth – delay irrigation. Perform earthing-up and weeding during breaks in rain.
Mango	Fruit development	Rising humidity may lead to fruit fly and mildew. Use fruit fly traps and spray recommended fungicides during rain-free periods.
Vegetable crops (general)	Various stages	Light rain and humidity may increase pest pressure. Mulch beds, monitor for sucking pests, and provide plant protection sprays after showers.

Livestock, Poultry, and Sericulture Advisory	
Sector	Weather-Based Advisory
Livestock	Ensure clean, shaded, and well-ventilated shelters to prevent heat and humidity stress. Provide plenty of clean drinking water . Use fans if possible. Avoid grazing during midday heat . Supplement with mineral mixture and salt licks to maintain animal health. Regularly check hooves and shelter hygiene due to increased moisture.
Poultry	Maintain proper cross-ventilation and ensure adequate space in sheds to avoid crowding. Sprinkle water around sheds to reduce temperature. Provide cool, clean water with electrolytes . Feed birds during early morning and evening . Ensure dry bedding to prevent fungal issues due to humidity.
Sericulture	Maintain optimal rearing room temperature (26–28°C) and humidity (75–80%) through humidifiers or water sprinkling . Avoid overcrowding of worms. Provide well-moistened mulberry leaves , and protect mulberry gardens from rain damage using proper drainage and partial shade. Monitor for fungal diseases due to changing humidity.
