Category	Advisory
Livestock	Provide clean and fresh drinking water regularly due to moderate temperatures. Ensure well-ventilated, dry, and shaded shelters to protect animals from humidity and mild rainfall. Monitor animals for signs of respiratory issues due to humid conditions.
Poultry	Keep poultry sheds dry and well-ventilated. Avoid overcrowding to reduce stress and disease risk during humid and rainy days. Provide clean water and balanced feed during cooler morning and evening hours. Maintain hygiene to prevent fungal and bacterial infections.

Recommendations to the farmers:-

Weather based advisory

Crop	Stage	Advisory Based on Forecast
Paddy	Summer-Harvesting Kharif- Nursery preparation	Harvest matured crop during dry days; postpone if rainfall is forecasted. Ensure harvested produce is dried and stored properly to avoid spoilage due to humidity. Select raised nursery beds to prevent water stagnation. Utilize clear sky periods for seedbed preparation and sowing. Arrange for drainage in case of heavy rainfall.
Maize	Vegetative	Apply fertilizers and weeding operations during dry, less windy days. Ensure sufficient soil moisture; avoid irrigation when rainfall is forecasted. Monitor for leaf spot due to humidity.
Tomato	Fruit formation	Protect fruits from cracking during sudden rain spells. Avoid spraying during windy or rainy conditions. Support plants to prevent lodging due to gusty winds.
Chilli	Fruit formation	Maintain proper drainage to avoid waterlogging. High humidity may encourage fungal infections—use preventive plant protection measures on dry days.
Banana	Fruit development	Provide support to prevent lodging from gusty winds. Maintain mulch for moisture retention. Avoid irrigation on rainy days. Watch for sigatoka and pseudostem weevil.
Black gram, Green gram, Red gram, Field bean, Cowpea	Sowing / Harvesting	For sowing, ensure good soil moisture; sow during dry spells. For harvesting, dry produce immediately after harvest to prevent post-harvest losses due to humidity.
Sugarcane	Vegetative	Carry out earthing up and fertilizer application during clear days. Ensure proper drainage in case of rain. Monitor for top shoot borer and mealy bugs.
Mango	Fruit development	Harvest mature fruits early in the day and avoid harvesting during wet periods. Protect harvested fruits from high humidity to prevent fungal rots.
Vegetable crops (general)	Various stages	Conduct pest and disease monitoring regularly, especially during humid conditions. Avoid foliar sprays during rainfall and windy days. Use rain-free days for intercultural operations.

Livestock, Poultry, and Sericulture Advisory	
Sector	Weather-Based Advisory
Livestock	Ensure clean, shaded, and well-ventilated shelters to prevent heat and humidity stress. Provide plenty of clean drinking water . Use fans if possible. Avoid grazing during midday heat . Supplement with mineral mixture and salt licks to maintain animal health. Regularly check hooves and shelter hygiene due to increased moisture.
Poultry	Maintain proper cross-ventilation and ensure adequate space in sheds to avoid crowding. Sprinkle water around sheds to reduce temperature. Provide cool, clean water with electrolytes . Feed birds during early morning and evening . Ensure dry bedding to prevent fungal issues due to humidity.
Sericulture	Maintain optimal rearing room temperature (26–28°C) and humidity (75–80%) through humidifiers or water sprinkling . Avoid overcrowding of worms. Provide well-moistened mulberry leaves , and protect mulberry gardens from rain damage using proper drainage and partial shade. Monitor for fungal diseases due to changing humidity.
