The day temperature is expected to be 27.0-28.0°C and night temperature is expected to be 9.0-11.0°C. The relative humidity in the morning hours is expected to be 68-70 % and afternoon relative humidity is expected to be in the range of 57-60 %, Wind speed is expected to be 3-4 km/hr.

SMS Advisory

Avoid pruning, fertilizer application and growth regulator sprays during cold wave conditions. Cloudy weather, cool nights may increase fungal disease risk—monitor crops closely and ensure fields have good drainage.

Recommendations to the farmers: -			
Crop	Pest/Disease	Damage symptoms	Control measures
General Advisory:			
Field Crops			
<ol style="list-style-type: none"> 1. Right time for harvesting, drying, cleaning and storage of Rabi crops. 2. Apply neem leaves/neem powder in grain bags as a natural repellent. 3. For long-term storage of pulses, store with tri-sodium phosphate (TSP) treated gunny sacks to reduce bruchid attack. 			
Vegetables & Horticulture			
<ol style="list-style-type: none"> 1. Watch for fruit borer and shoot borer in fruit development stage. 2. Spray the chemicals early morning and late evening for better pest and disease control. 			
Livestock & Poultry			
<ol style="list-style-type: none"> 1. Maintain optimum lighting schedule to support winter egg production. 2. Give dry fodder and provide shelter to animals in evening higher humidity. 3. Maintain hygiene in sheds to prevent infections. 			

Crop	Stage	Weather-Based Agromet Advisory	
Ragi	Post harvest	Dry the harvested ear heads on clean tarpaulins until grain moisture reaches about 12%.	
Redgram	Post harvest	Dry the harvested pods in 3-4 days and separate the seeds and store in cool places The grain moisture reaches about 14%.	
Tomato	Fruit Maturity	<p>Avoid irrigation during this stage, especially under cloudy or humid conditions. Ensure proper drainage to avoid water stagnation. High humidity may favor fruit rot, late blight, bacterial spot, and anthracnose. Remove and destroy affected fruits to prevent spread.</p>	
Cowpea	Harvesting and Post harvest stage	Harvest the matured pod and dry in clean tarpaulins until grain moisture reaches about 15%.	
Field bean	Harvesting and Post harvest stage	Harvest the matured pod and dry in clean tarpaulins until grain moisture reaches about 15%.	
Chilli	Fruit development stage	<p>Spray Carbendazim 1 g/l of water or Copper oxychloride 2.5 g/l of water for anthracnose. For thrips, use Fipronil 1 g/l of water or Neem oil 3 ml/l of water. Avoid water stagnation in crop field.</p>	
Rose	Flowering stage	<p>Harvest during late morning after temperature rises; avoid late-evening irrigation; prefer light irrigation during daytime. To control of aphids in rose to spray Dimethoate 30 EC @ 1.7 ml/litre of water.</p>	
Guava	Fruit development	<p>Fruit fly (<i>Bactrocera spp.</i>) spray entomopathogenic fungus (<i>Beauveria bassiana</i>) @ 10 g/litre water on infested fruits. Use Methyl eugenol traps (10/acre) for fruit fly.</p>	

		Spray Imidacloprid 0.3 ml/L for control of aphids and mealy bug infestation. Apply UV-stabilized weed mats around crop rows or tree basins to effectively block sunlight and suppress weed growth.
Mango	Flowering stage	To control of green leaf hopper in Mango spray Imidacloprid 17.8 SL @ 0.3 ml /l of water To control of powdery mildew in Mango spray wettable sulphur @ 3 g /l of water in leaf and flower parts of affected parts. Avoid irrigation during flowering unless severe moisture stress is observed.

Livestock, Poultry, and Sericulture Advisory (Very light Rainfall & High Temperature)

Sector	Weather-Based Advisory
Livestock	<ol style="list-style-type: none"> 1. Provide dry and clean shelter; avoid animals standing in wet areas. 2. Provide ample clean drinking water. 3. Monitor for tick and mite infestations; use approved acaricides if needed. 4. Provide balanced feed and mineral supplements. 5. Minimum temperatures cause cold stress in young calves/kids. Provide bedding (dry straw) and night shelter to reduce cold exposure.
Sericulture	<p>Humid and rainy conditions increase grasserie, flacherie and fungal diseases</p> <ol style="list-style-type: none"> 1. Maintain proper rearing house hygiene, clean and disinfect trays. 2. The recommendation of farmers closes the windows with tarpaulins sheet during night hours to maintain optimum room temperature. 3. Avoid wet or damp mulberry leaves, use air-dried or well-drained leaves.
Poultry	<ol style="list-style-type: none"> 1. Cool early mornings need brooder temperature maintenance for chicks. 2. Maintain poultry shed dryness; use lime powder to reduce moisture. 3. Provide electrolytes + vitamins in water for immunity. 4. Cool, humid mornings favor: CRD (Chronic Respiratory Disease), Coccidiosis, Colibacillosis- Follow routine vaccinations strictly (Ranikhet, IBD). 5. Maintain optimum lighting schedule to support winter egg production.
